Subject:	Allow setting of individual IPv6 reverse DNS entries		
Description:	<p>At the moment the only way to set IPv6 reverse DNS is to delegate the whole zone to the customer's own servers. In practice this can be a server on the customer's VPS plus one or more BitFolk servers provided for free, but people are perhaps hesitant to get into setting up a DNS server especially if they have never done so before.</p> <p>So, we could manage this for them.</p>
