Subject:	Provide SSH host key fingerprint for installs not done by the customer		
Description:	<p>Whenever BitFolk carries out a VPS install for the customer (either from image file or in some future unattended fashion), the fingerprint of the new VPS's SSH host key should be provided to the customer so they can verify that the new host they will connect to is actually their VPS.</p> <p>For image file installs (the most common) it could just be included within the setup email.</p>
