| Subject: | disks command should not be usable while there are active snapshots | | |
| Description: | <p>If you try to delete a disk that currently has a snapshot, the *disks* command gives a generic error and gives up:</p> <pre><pre> Deleting disk "xvda"... Failed to lvremove /dev/mainvg/domu_foo_xvda. Aborting. </pre></pre> <p>This situation is something that is detectable - the *disks* command shouldn't be usable while there are snapshots active.</p> | | |
